## Grays Harbor County Assessor Announces New Public Mapping Website

*Grays Harbor County*—Grays Harbor County Assessor, Dan Lindgren has announced that the Assessor's Office has built a new public facing tax parcel mapping site. This site will replace the existing MapSifter website. The current MapSifter site will remain active until at least the end of May 2024 in parallel with the new MapGeo site.

### **Positive Customer Impact**

MapGeo is a technologically advanced, industry leading mapping website that resonates the Grays Harbor County Assessor's Office's commitment to make parcel data and easy to use maps readily available to the public. The new site includes a long list of upgrades and features not currently available on MapSifter. Some of the added features include additional G.I.S. (Geographic Information System) layers that can be laid over the new layers of imagery and basemaps. The new county MapGeo site will include additional years of aerial imagery, LIDAR, integrated Google Street view, and zoning information, as well as many other advanced mapping features and GIS layers.

The parent company that has partnered with the Assessor's Office to build the new Map Geo site, The Sanborn Map Company, has an unbroken history of mapping the urban landscape that dates back to 1866. Today, Sanborn is a leading geospatial data provider and geospatial solutions creator serving state and local governments across the nation.

“It has been a pleasure to work with the team at Grays Harbor,” said Laura Doty, Project Manager at the Sanborn Map Company. “MapGeo is a perfect fit providing staff and residents access to their property data and also maps of recent property sales, forest roads and seashore conservation areas. It is exciting to welcome a new county to the MapGeo family of users.”

### **MapGeo Availability**

MapGeo is available for immediate access at the Assessor’s Office Home page of the Grays Harbor County Website. Grays Harbor County is the first county in Washington State to implement this leading edge public facing mapping site.
